APPLICATION CONDITIONS AND PRODUCT HANDLING

To ensure the best quality finish, please be sure to follow the recommended settings.

Temperature and Dampnes

- Infeel adhesive films should be applied when air and surface temperature are between 68°F (20°C) and 77°F (25°C).
- The minimum recommended temperature is 53°F (11°C). If the temperature is below 53°F : use a heater, such as a portable gas - fired infrared radiant heater to raise the temperature.

High Temperature / Low Temperature Dampness

- Do not apply to damp surfaces. The surface should be completely dry prior to beginning the installation.
- Utilize a heat gun for adhesion strengthening.

Work Environment

- Proper lighting.
The working area should be well lit in order to prevent air pockets or wrinkles on the film.
- Dust free.
Working in a dust free area reduces the potential of particles sticking into the film.

Product Handling

- The film must be kept in a cool and dry place. The product should be installed within one year of purchase.
Note : If handling film in the winter, cold weather conditions can lead to cracks on the product.
Tip : Roll up the remaining film and store it inside a paper tube. This will prevent the film from getting damaged,

Surface Preparation

- The condition of the surface is critical for a quality installation and finish. As a rule, INFEEL adhesive film can be applied onto any clean, dry, smooth or even slightly porous surfaces. These surfaces must be free of dust, grease and wax ; this includes for example, veneer board, aluminum, stainless steel, glass and most painted surfaces. Fresh primer must be completely dry before application because the vapors from the solvents can result in blistering and excessive shrinkage.

www.balquimic.com

Wood / Veneer / Hardboard	Steel / Aluminum / Stainless
1. Smooth and polish the surface, using #180 sandpaper. 2. If there are rough, rugged or joint areas then treat the areas with putty (a filling or tamping) and follow step 1. 3. Coat the surface evenly with the exclusive primer for INFEEL adhesive films.	1. Smooth and polish the surface, using #180 sandpaper. Scrape the rust off the surface and remove the filth with paint (lacquer) thinner. 2. If there are rough, rugged or joint areas then treat the areas with poly - putty and follow step 1. 3. Coat the surface evenly with the exclusive primer for INFEEL adhesive films. Try not to leave primer residue on the surface border.
